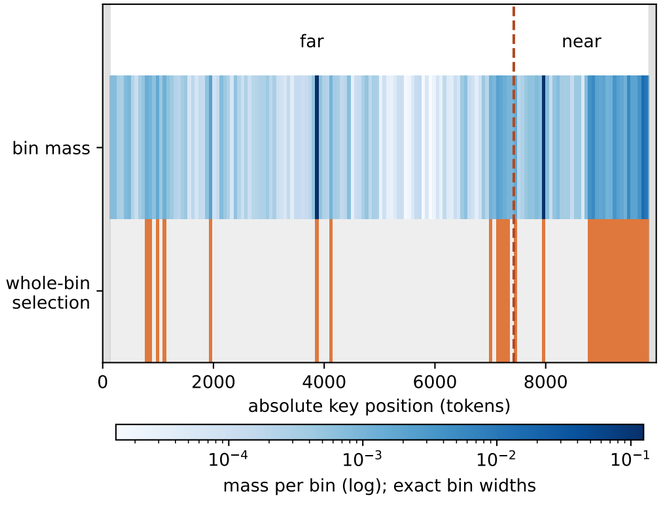
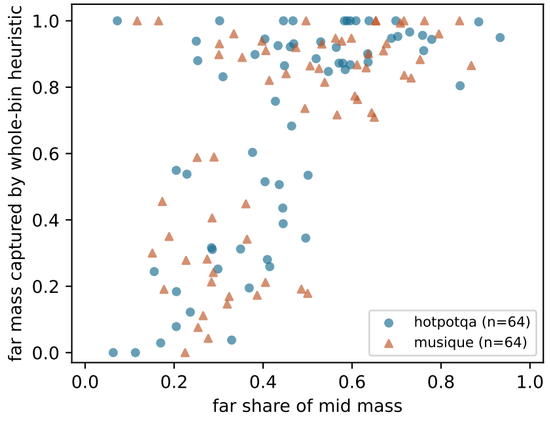
DIAGNOSTIC ONLY - NOT VALIDATED PAPER EVIDENCE
Whole-bin heuristic, not token TopK or an upper bound. E6 gate evidence blocked.
TL-OBS-PLOT-CORRECTNESS-20261016 | Existing aggregates; no new collection

(a) Existing mass bins



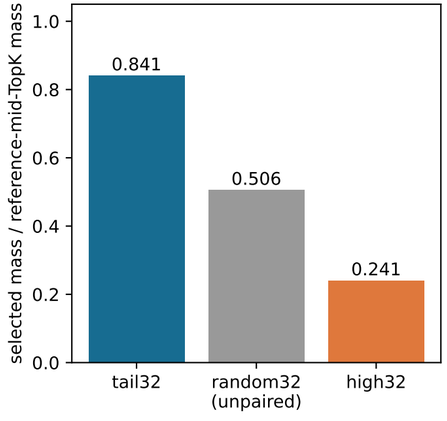
musique s1 L24 q9996
Selected 1997 / cap 2048 mid tokens
All tokens in each selected bin; gray = protected

(b) Budget-feasible diagnostic



Far mean 0.676 (n=128)
Near mean 0.931 (n=128)
Near > far: 100/128 finite pairs
Selected 257–2048 tokens; cap 2048

(c) Existing O3 ratios



Equal cell means; 8 task/sample/layer cells.
Not full-attention mass; no paired-random control.

(d) Gate evidence blocked

Historical E6 is not comparable:

- summed logits before softmax
- last sampled query only
- far = [64, t − 2048)

Current gate safety and skip thresholds cannot be inferred.

No E6 heatmap or skip count is used in this diagnostic.

128 query/layer observations from 4 source sequences; document overlap unresolved. Repeated observations are descriptive, not independent trials.
